

# REPORT

## Taxonomic training & access to collections in Belgium

### NOTICE

The present questionnaire must arrive with the Belgian National Focal Point to the Global Taxonomy Initiative within one month of the official closure of the capacity building visits. Electronic submission on the general e-mail address of the Belgian GTI NFP ([cbd-gti@naturalsciences.be](mailto:cbd-gti@naturalsciences.be)) is strongly encouraged. If electronic submission should however be impossible, paper copies may be sent by fax or ordinary mail. The Belgian GTI NFP will acknowledge receipt of all project reports.

If grantees have **relevant pictures** to illustrate their capacity building visit, these may be annexed to the report. The Belgian National Focal Point might use some of these pictures in one of its reporting activities, but only after the copyright holder has given his permission.

### Contact and further information

Dr M-L Susini Ondafe  
Belgian Focal Point to the Global Taxonomy Initiative,  
Royal Belgian Institute of Natural Sciences  
Vautierstraat 29,  
B-1000 Brussels, Belgium  
Tel.: +32 2 627 45 90  
Fax: +32 2 627 41 41

## PART I – CANDIDATE INFORMATION

Family name:	DO
First name(s):	Van Tu
Nationality:	Vietnam
Date of arrival and departure in / from Belgium	06 August 2017/02 September 2017
Number of training days:	28
Type of visit	<input checked="" type="checkbox"/> Mainly training in taxonomy and collection management <input type="checkbox"/> Mainly access to collections <input type="checkbox"/> Other, <i>specify</i>
Location of training:	<input checked="" type="checkbox"/> Royal Belgian Institute of Natural Sciences, Brussels <input type="checkbox"/> Royal Museum for Central Africa, Tervuren <input type="checkbox"/> Botanic Garden of Meise <input type="checkbox"/> Other, <i>specify</i>

## PART II - GENERAL INFORMATION

Describe concisely how you have learned about the Belgian GTI Project	I have received the information about the Belgian GTI Project from Vietnamese National Focal Point to the Global Taxonomy Initiative. Then, I have learned about the Belgian GTI Project from the website <a href="http://www.taxonomy.be/">http://www.taxonomy.be/</a>
Describe concisely how you have learned about this specific call for proposals	I have received the information about this specific call for proposals from Vietnamese National Focal Point to the Global Taxonomy Initiative.
Describe concisely why you needed capacity building in taxonomy and collection management	I am working on the field of taxonomy of molluscs. I have a collection of many mollusc specimens. However, my knowledge in taxonomy and collection management is still limited. That is why I need capacity building in taxonomy and collection management.
Describe concisely what support (e.g. training, access to collections,...) you have received and how this training can be related to taxonomy and /or collection management	I have been trained in taxonomy, especially modern techniques such as DNA extraction, Polymerase chain reaction (PCR), sequencing, and analysis DNA sequence data using softwares as MEGA, Codoncode. Molecular data is very important in taxonomy and phylogeny studies.

Describe concisely how your gained capacity will help you in your professional duties	The knowledge I have learnt in the training will help me conduct integrative studies in taxonomy and phylogeny which based on both morphology and molecular data.
Describe concisely how your gained capacity will be implemented in your institution	I will propose the research projects based on what I have learnt from the training. These projects will be mainly implemented in my institution. I will share my knowledge with my colleagues and students when we work together.
Describe concisely what other support you eventually would need	I will need the cooperation projects which I can continue to work with my supervisor and his team in Royal Belgian Institute of Natural Sciences.
Describe concisely what infrastructural and human resources you and your institution eventually still need to become fully functional	My institution and I still need help to enhance research capacity in taxonomy including knowledge and equipment such as PCR Thermal Cyclers, DNA sequencers. So that we can conduct the integrative taxonomy studies. In addition, we also need support in collection management such as the purchase of good containers for preserving specimens and specimen digitization.
Describe concisely how you think the Belgian GTI National Focal Point could further construct capacity for you and your institution	Belgian GTI National Focal Point can continue to support training me to improve my knowledges in taxonomy, assist in purchasing research equipment, building and managing the specimen collection, as well as conducting collaborative researches.

### PART III – TAXON SPECIFIC INFORMATION

<p>What is your taxon of interest</p>	<p>I am very interested in mollusca including gastropoda and bivalvia. I am also interested in studying taxonomy of freshwater crabs and shrimps (<i>Atyidae</i>, <i>Palaemonidae</i>, <i>Potamidae</i>).</p>
<p>Describe concisely how you intend to make your taxonomic data available to other colleagues</p>	<p>I usually write scientific papers to publish in international journals. Moreover, I intend to publish my taxonomic data to through the Global Biodiversity Information Facility (GBIF).</p>
<p>Describe how your taxonomic work helps improving the status of biodiversity in your country</p>	<p>Vietnam has a high diversity of molluscan fauna. However, the studies of this group are limited. The available data does not fully reflect the biodiversity in this country, and the information about the species is deficient and their taxonomy is out of date. In the past few decades, the degradation and pollution of the environment has placed many species of Vietnamese molluscs in Threatened status. My taxonomic works will be important inputs to better understand molluscan fauna in Vietnam and Asia as well as the basis for the exploitation and conservation of biodiversity.</p>
<p>Describe how your project could help reduce poverty in your country</p>	<p>The poverty rate in Vietnam is still very high. The lives of the poor people often depend primarily on the exploitation of the natural resources available around them. Therefore, if we have a better understanding, better conservation of biodiversity and rational exploitation, we will help to reduce poverty in our country.</p> <p>Freshwater molluscs have a vital role in the freshwater ecosystems and the daily lives of Vietnamese. Many studies have shown that freshwater mollusc diversity has high levels of endemism. Results of the project will be the key materials for further research on the biology, ecology (e.g. studies on degradation and recovery of ecosystems, forecast ecosystem changes under the influence of natural factors, urbanization and industrial development), invasion biology, pollution (i.e. using mollusc biological indicators to assess the level of pollution), etc. Data collected from the project will be the basis for the sustainable exploitation and as well as the conservation of biodiversity in general and freshwater mollusc in particular in Vietnam. The research results of the project will contribute to promoting the task of establishing inland water conservation zones in our country, contributing to argumentative science technology, speeding up the consideration in authorities for decision-making on the system of inland water conservation areas will be established in our country in the coming time.</p>
